Sanitrack

COMPLETE SANITATION VISIBILITY

Revolutionize your sanitation protocols with Sanitrack, the premier digital Master Sanitation Schedule (MSS) solution. By replacing archaic paper logs with a dynamic, cloud-based system, Sanitrack empowers your team to execute cleaning tasks with precision, ensuring every square inch of your facility is audit-ready, every single day.

Return on Investment

Unlock significant operational savings by eliminating thousands of labor hours previously wasted on manual documentation and review. Optimize chemical usage and reduce cleaning cycle times through data-driven insights, directly boosting your production uptime and bottom line.

Compliance & Safety

Achieve unshakeable confidence during audits. Sanitrack creates an immutable, time-stamped digital record of every cleaning activity, guaranteeing 100% compliance with SQF, BRC, and USDA standards. Say goodbye to missing signatures and "ghost logging" forever.

Management & Oversight

Command your sanitation operations from anywhere. Managers gain a bird's-eye view of facility hygiene in real-time, with the ability to assign tasks instantly and receive automated alerts for missed cleanings, enabling proactive intervention before risks escalate.

EMP

VISUALIZE FACILITY HEALTH

Transform your understanding of facility hygiene with our Environmental Monitoring Program (EMP) tool. By converting static floor plans into vibrant, interactive 3D maps, we allow you to visualize the invisible—tracking pathogen vectors and identifying contamination hotspots with pinpoint accuracy before they threaten your product.

Return on Investment

Protect your brand from the devastating financial impact of a recall. By identifying and neutralizing harborage sites early, you avoid product loss and production halts. Targeted, data-backed cleaning reduces unnecessary swabbing and chemical spend.

Compliance & Safety

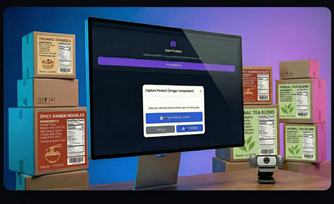

Present auditors with a sophisticated, visual narrative of your environmental control. Demonstrate a robust, proactive approach to pathogen management with historical tracking and trend analysis that proves your facility is under control.

Management & Oversight

Simplify the complexity of environmental scheduling. Our intelligent system automates swabbing schedules based on risk zones, while visual heatmaps allow QA managers to make instant, science-based decisions on remediation strategies.

Label Scanner

ZERO ERRORS. ZERO RECALLS.

Eliminate the #1 cause of food recalls with our AI-powered Label Scanner. This cutting-edge tool acts as an infallible digital gatekeeper, instantly verifying that every incoming ingredient label matches your approved specifications, catching subtle errors that the human eye simply cannot see.

Return on Investment

The cost of a single mislabeling-recall can bankrupt a company. Our scanner provides an inexpensive insurance policy against this catastrophe, preventing waste by catching incorrect ingredients at the receiving dock before they ever enter your production stream.

Compliance & Safety

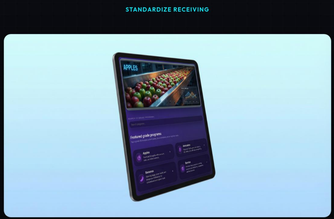

Guarantee 100% verification against approved specifications. Every scan creates a digital record, providing complete traceability and proof of due diligence for allergen control and ingredient verification protocols.

Management & Oversight

Monitor receiving accuracy in real-time across all your facilities. Receive instant push notifications for rejected loads or specification mismatches, allowing management to take immediate corrective action with suppliers.

ReceiverX

STANDARDIZE RECEIVING

Eliminate the chaos of the receiving dock with ReceiverX. Equip your frontline agents with a powerful digital tool that enforces USDA grades and company-specific quality standards, ensuring that every shipment is inspected with the same rigorous consistency, regardless of the location or shift.

Return on Investment

Stop paying full price for substandard product. ReceiverX empowers your team to reject non-compliant shipments immediately with objective, documented data, ensuring you only pay for the quality you actually ordered.

Compliance & Safety

Enforce USDA grading standards automatically. Ensure every incoming load meets your strict safety and quality criteria before it touches your inventory, maintaining the integrity of your supply chain from the very first step.

Management & Oversight

Centralize your receiving data into a powerful dashboard. Identify supplier trends, track rejection rates, and manage vendor performance with comprehensive analytics that drive better purchasing decisions.
